Contents

1 Compiler

1.1 webpack

webpack is a module bundler for node.js which resolves imports, compiles React/TypeScript code to static js, html, and css, and optionally serves this website to localhost. File `./package.json` contains scripts to run a the development server or compile a production build.

2 State Propogation

2.1 redux

- List entries start with the \item command.

2.2 redux-oidc

2.3 connected-react-router

3 Applet Registry

3.1 Philosophy

The goal is for the header and toolbar to create a viewport for applets.
Settings on the header should only pertain to global variables

3.2 Applets

The applet type is defined in src/components/applets.
